

100% Free Portfolio Deployment (No WordPress)

This guide shows you how to deploy your portfolio completely free without WordPress.

Why This Approach?

- ✓ **Completely Free** - \$0/month forever
- ✓ **Lightning Fast** - Static site performance
- ✓ **Simple Updates** - Edit files, rebuild, deploy
- ✓ **No Maintenance** - No WordPress updates or security issues
- ✓ **Professional** - Same beautiful design

Deploy in 10 Minutes

Step 1: Install Dependencies (2 min)

```
bash  
  
cd shoaib-portfolio  
npm install
```

Step 2: Update Your Information (5 min)

Open `lib/wordpress.ts` and update:

```
typescript  
  
export const getMockPersonalInfo = (): PersonalInfo => ({  
  phone: '+1 (xxx) xxx-xxxx',      // YOUR PHONE  
  email: 'shoaib@example.com',     // YOUR EMAIL  
  linkedin: 'https://linkedin.com/in/shoaib-profile', // YOUR LINKEDIN  
  github: 'https://github.com/your-username',      // YOUR GITHUB  
  instagram: 'https://instagram.com/your-handle',  // YOUR INSTAGRAM  
  resume_url: '/resume.pdf',  
  bio: 'Computer Science student at Nipissing University, passionate about distributed systems, AI, and secure application dev  
  profile_image: '/profile.jpg',  
});
```

Step 3: Add Your Files (1 min)

Place these files in the `public/` folder:

- `profile.jpg` - Your photo
- `resume.pdf` - Your resume PDF

Step 4: Deploy to Firebase (2 min)

```
bash

# Login to Firebase
firebase login

# Initialize (first time only)
firebase init hosting
# Choose: Use existing project OR create new project
# Public directory: out
# Single-page app: Yes
# Don't overwrite index.html: Yes

# Build and deploy
npm run export
firebase deploy --only hosting
```

Done! 🎉 Your site is live at <https://your-project-id.web.app>

How to Add/Update Content

Adding Blog Posts

Edit [lib/wordpress.ts](#) and add to the array:

```
typescript
```

```
export const getMockBlogPosts = (): BlogPost[] => [
  {
    id: 1,
    date: '2025-01-28',
    title: { rendered: 'My First Blog Post' },
    content: {
      rendered: `
        <h2>Introduction</h2>
        <p>This is my first blog post about...</p>
        <p>You can use HTML tags for formatting.</p>
      `,
    },
    excerpt: { rendered: '<p>A short preview of the post...</p>' },
    featured_media: 1,
  },
  {
    id: 2,
    date: '2025-01-20',
    title: { rendered: 'My Second Post' },
    content: { rendered: '<p>Content here...</p>' },
    excerpt: { rendered: '<p>Preview...</p>' },
    featured_media: 2,
  },
  // Add more posts here
];
```

Adding Projects

Edit `lib/wordpress.ts`:

typescript

```
export const getMockProjects = (): Project[] => [
  {
    id: 1,
    title: { rendered: 'Secure Expense Tracker' },
    content: {
      rendered: '<p>A cloud-powered expense management system with Firebase, Flask, and OCR processing.</p>'
    },
    acf: {
      project_url: 'https://your-demo-url.com', // Optional
      github_url: 'https://github.com/you/project', // Your GitHub repo
      technologies: 'Firebase, Flask, Python, OCR', // Comma separated
    },
  },
  {
    id: 2,
    title: { rendered: 'AI Video Analyzer' },
    content: { rendered: '<p>Description of your project...</p>' },
    acf: {
      github_url: 'https://github.com/you/ai-analyzer',
      technologies: 'Next.js, Python, TensorFlow',
    },
  },
  // Add your other projects
];
```

Updating Resume

Edit `pages/resume.tsx` directly. Search for sections like:

```
typescript

// Education Section
<h3>Bachelor of Science in Computer Science</h3>
<p className={styles.institution}>Nipissing University</p>

// Skills Section
<span>Python</span>
<span>JavaScript</span>
// Add more skills
```

After Making Changes

```
bash
```

```
# Rebuild
```

```
npm run export
```

```
# Deploy
```

```
firebase deploy --only hosting
```

Changes appear in 30 seconds!

Customization Examples

Change Your Name in Header

Edit `components/Header.tsx`:

```
typescript
```

```
<Link href="/" className={styles.logo}>  
  Shoaib // Change this to your name  
</Link>
```

Add Gallery Images

1. Put images in `public/gallery/`
2. Edit `pages/index.tsx`, find the gallery section:

```
typescript
```

```
<div className={styles.galleryGrid}>  
  <div className={styles.galleryItem}>  
      
  </div>  
  <div className={styles.galleryItem}>  
      
  </div>  
  // Add more...  
</div>
```

Update Your Bio on Homepage

Edit `pages/index.tsx`:

```
typescript
```

<p className={styles.heroSubtitle}>

Your custom bio text here...

</p>

💰 Cost Breakdown

Service	Cost
Firebase Hosting	FREE (10GB storage, 360MB/day)
Domain (Optional)	\$12/year (or use free .web.app)
SSL Certificate	FREE (included)
Total	\$0 - \$12/year

Compare to WordPress options:

- WordPress.com Business: \$300/year
- Shared hosting: \$60-120/year
- Your solution: **\$0/year** ✨

🎯 Workflow Example

Scenario: You completed a new project

1. Open `lib/wordpress.ts`
2. Add project to `getMockProjects()`
3. Run: `npm run export`
4. Run: `firebase deploy`
5. Changes live in 30 seconds!

Time: 2 minutes total

What You Get

- ✓ Professional portfolio website
 - ✓ Blog section with posts
 - ✓ Projects showcase
 - ✓ Resume page with download
 - ✓ Contact information
 - ✓ Social media links
 - ✓ Photo gallery
 - ✓ Mobile responsive
 - ✓ Lightning fast
 - ✓ Secure (HTTPS)
 - ✓ **100% Free hosting**
-

Future: Add WordPress Later

If you later want WordPress editing:

1. Get WordPress hosting (when you can afford it)
2. Install the included plugin
3. Update `.env.local` with WordPress URL
4. Change mock functions to real API calls
5. Redeploy

Your site will look identical, just with easier editing!

Common Questions

Q: Can I use a custom domain?

A: Yes! Firebase allows custom domains. Buy from Namecheap (\$12/year), connect in Firebase Console.

Q: How do I update the site?

A: Edit code files, run `npm run export`, then `firebase deploy`. Takes 2 minutes.

Q: Is editing code hard?

A: No! You're just editing text in files. Follow the examples above.

Q: What if I make a mistake?

A: Test locally first with `npm run dev` before deploying.

Q: Can I move to WordPress later?

A: Yes! All the WordPress integration code is ready. Just connect it when ready.

Q: Will Firebase stay free?

A: Yes, generous free tier. Your portfolio won't exceed limits.

Learning Resources

- **Editing Content:** Just follow examples in `lib/wordpress.ts`
 - **HTML Basics:** [w3schools.com/html](https://www.w3schools.com/html)
 - **Firebase Docs:** firebase.google.com/docs/hosting
 - **Git for Backup:** github.com or gitlab.com
-

Pro Tips

1. **Use Git:** Track changes with GitHub
 2. **Test First:** Run `npm run dev` before deploying
 3. **Backup:** Keep a copy of your code
 4. **Update Regularly:** Add new projects as you complete them
 5. **Share:** Put your portfolio link on your resume!
-

You're Ready!

You now have:

- ☒ Professional portfolio website
- ☒ 100% free hosting
- ☒ Easy to update
- ☒ Fast and secure
- ☒ No ongoing costs

Deploy it and start showcasing your work!

Questions? Just edit the code files following the examples above. You've got this!
